

PROJECT: PRIVATE HOME

Technical Information	
Location	Houses throughout the Netherlands
Technology	1 unit of 1 kWe electric Stirling / 14 kWth heat
Supplier	The Magic Boiler Company
Manufacturer & Type	AC WhisperGen MKVB, New Zealand
Goal	A State of the art “power station for your home” provides 100% of the heat required and up to 80% of the electricity for an individual home.
Duration	Permanent installation replacing a condensing boiler
Specifics	Installs like a regular boiler, with extra comfort.
Preliminary results	Home owners have indicated they are very satisfied with the WhisperGen technology: it does what it promises. It provides all the heat a home needs. It reduces the electricity bill, and it helps the environment.

The WhisperGen runs like a normal boiler, and fills up a hot water store for extra comfort. It is suitable for almost all regular homes and produces not only hot water and heating, but also electricity. People living with a WhisperGen in their home have commented on how little they notice the new technology in their lives. They get the benefits, but not the burden.

Magic Boiler has been asked by many different home owners to install a WhisperGen in their homes to replace the old condensing boiler. Magic Boiler provides the installation and maintenance service with a network of trained service companies. The WhisperGen connects to the same pipes & drains as the existing boiler, and is installed in a day. The WhisperGen is suitable for most one-family homes.
